## Capper Animal Feeds

Capper Trading Ltd under the leadership of its founder, Robert Capper, has long been identified by manufacturing and transporting high quality coarse & complete ruminant feeds throughout Ireland. At our Tamnamore site, located at Junction 14 on the M1, we are ideally

located for easy customer collections and delivery of feeds. In 2016 we invested in a new state of the art feed mill which enables us to manufacture consistent high-quality ruminant feeds more efficiently. Here at Capper Trading we strive for excellent customer service and customer satisfaction.

## Meet Our Staff

### Alison Cairns

Since joining Capper Trading in 2006 and having grown up on a sheep / beef farm, Alison's agricultural knowledge and experience has helped her achieve the managerial position overseeing production and sales. Having attended many courses and events and gained invaluable knowledge and experience, Alison commits much of her time to research and development of the Company's feed rations and in producing the best nutritional recipes available. She continues to involve herself in sales and customer service and ensures all our agricultural customers receive the best possible service.

## Cereals

### Flaked Maize

### Ground Maize

Maize has the highest energy content of all the cereal crops, containing twice as much oil as wheat or barley. It is also very high in starch; the starch in maize is slowly fermented, compared to that in wheat or barley, with up to 30% of it escaping fermentation. By micronizing or flaking maize, we increase its digestibility and make it more available to the young fast-growing animal. The inclusion of flaked maize in the feed also increases its palatability. Maize is available to buy both flaked and ground.

### Flaked Barley

### Ground Barley

A rapidly digestible source of carbohydrate which when combined with maize is an ideal starch source for ruminant livestock. By flaking barley, we increase its digestibility and hence the feeding value of the barley.

Barley is available to buy both flaked and ground.

### Alfalfa

Alfalfa, also known as Lucerne, is a legume grown around the world as a forage crop. It has the highest feeding values of all the hay crops as it is high in both protein and digestible fibres. Its structure is ideal for providing optimum 'scratch effect' in ruminants. This scratch effect is essential for correct rumen function, especially when high starch diets are being fed. The inclusion of alfalfa in our complete diets ensures digestive upsets are minimised, without compromising on maximum daily live weight gain. **Our specialised complete diets and beef finishing diets Complete Calf Starter, Complete Calf Grower, Complete Bean Meal and Superelite contain alfalfa.**

Palatable 18% ad lib starter ration for young calves on milk. **No forage required** as it contains alfalfa, a high-quality roughage ideal for rumen development. Due to the inclusion of fibre in this diet, quality Ingredients can be fed at higher rates, giving improved weight gain. Contains optimum levels of cooked flaked materials including maize, barley and soya. Contains 'Protected Hi Pro (Bean) Meal', a protein source of amino acids for the fast-growing calf. Labour costs are reduced as calves can be fed once a day. A high level of vitamin E is included to help boost the calf's developing immune system.

## TMR Bullpower

TMR Bullpower is a mineral pack designed specifically for feeding to fattening cattle on a high plain of nutrition. Cattle on a diet that is high in sugars and starches are prone to developing metabolic disorders such as acidosis (both sub clinical and acute), laminitis and bloat. Left uncorrected, these will lead to significantly reduced liveweight gain, poor feed conversion efficiency, and consequently, financial losses. Feeding **TMR Bullpower**, in the presence of good animal husbandry, has been shown to significantly reduce metabolic disorders, leading to higher daily liveweight gains, higher feed conversion efficiency and higher profit margins. **Our intensive rations, Superelite and Complete Bean Meal, contain TMR bullpower.**

### Ingredients:

Calcium carbonate, salt, monocalcium phosphate, minerals and vitamins, yeast

Vitamin A	200,000i u/kg	Copper	1,130mg /kg
Vitamin D3	40,000iu /kg	Selenium	15mg/k g
Vitamin E	1,000mg /kg	Calcium	15%
Phosphorus	2%	Salt	8%
Yeast (as <i>Saccharomyces Cerevisiae</i> , ref.No.MUCL 39885:)			$1.8 \times 10^{10}$ /kg

### Feeding TMR Bullpower will:

- Stimulate forage digestion
- Improve microbial protein supply
- Modulate rumen pH
- Reduce acidosis and bloat
- Reduce laminitis
- Improve feed intake
- Improve feed utilisation
- Improve daily liveweight gain by up to 11%
- Improve carcase gain
- Improve killout percentage
- Improve grading

**Are you getting tight on fodder?** This will help you get through the winter if your forage is not up to it in terms of either quality or quantity. One kilo of this ration has the same energy and protein as five kilos of silage (20% DM) /three kilos of baled silage (33% DM) / two kilos of hay - So do your sums, which is cheaper? Use it as fodder stretcher rather than replacer. High level of digestible fibres ensuring good rumen fill, includes barley, thereby ensuring good digestibility. Well-fortified with minerals and vitamins for the fast-growing animal.
